

GSI Matrix Virtualization Platform

Welcome to GSI's Matrix Virtualization Platform. GSI's Matrix combines best-of-breed technologies, ServerHeroes® support, and a bulletproof guarantee into a true enterprise-ready hosted virtualization platform.

KEY FEATURES

- Rapid deployment cycle
- Rapid scaling of additional resources
- Flexible month-to-month contracts
- Daily snapshots for maximum recoverability
- Instant access to private network zones, firewall configuration changes and additional resources
- Hardware-independent, redundant platform
- Maximum online time and system availability
- Fully functional Cisco-powered networking
- Full feature set of VMware Enterprise Edition, including VMotion, DRS, Storage VMotion, Virtual Switching, and more
- Access to hundreds of CPU cores, and Terabytes of SAN storage and RAM
- Availability of a full suite of compliance services including: Audit Support, Change Control, Logging, Intrusion Detection, Firewalls, Anti-Virus, System Updates, File Integrity Monitoring, Scanning, Private MTA relay, GSI WebProtect (SQL Injection and Cross Site Scripting Protection)
- Green computing platform uses 50% less power/cooling than traditional servers
- Assigned ServerHeroes teams master your systems and will stand behind you on any issues that arise 24x7
- Fully backed by our always available team of engineers, technicians, and client services personnel

GSI Matrix Virtualization Platform

Advantages of the Matrix Virtual Platform

Rapid Deployment of VM Templates

We provide templates that are secure, patched, and preconfigured with the tools of your choice. GSI has dozens of templates available for deployment in a matter of minutes. We can even work with you to build customized templates for future use by your team.

No Mushy “Cloud Speak”

We offer real technologies from VMware, Cisco, Dell, Network Appliance, and Force 10 Networks. That means you know what technologies, what versions, and what vendors stand behind each component. That also means GSI can stand behind the scalability, availability, and performance of each VM deployed into our Matrix environment.

Built Upon a Fully PCI DSS, Securely Managed Infrastructure

Which means your data, applications, and business integrity can be protected when it really counts. GSI is the world leader in PCI DSS compliant managed hosting services and can handle your Matrix VMs with the same level of security and protection as we would a PCI DSS regulated physical server.

Infrastructure Scalability

Leveraging GSI's investments in building a world-class data center and virtualization platform means you aren't negotiating for capital expense projects when it

is time to move your project to a virtual infrastructure. Whether you have one server or 150 servers, GSI has the infrastructure, the technology and the talent.

Support for Any Operating System

Whether you are looking for a Windows 2003, Windows 2008, Windows XP, Windows Vista, RedHat, Ubuntu, CentOS or other alternative operating system platform, GSI's Matrix can support it. We offer flexible configurations and a full range of support and management services.

24x7 Support

GSI's Matrix is backed by our 24x7 staff of engineers specializing in the operations, configuration, and management of the networks, servers, and security services you will need from your hosted applications and sites. We can provide a full suite of management services to your Matrix or physical servers. This includes site and server health monitoring, backup services, operating system management, application configuration support, and a full range of IT compliance and security services.

Advanced Security

GSI provides firewall and networking services to all Matrix systems. We can provide you with one or more private network segments to ensure your systems are secure and properly segregated.

60-day Satisfaction Guarantee

We're so confident in our Matrix infrastructure platform that it is backed with a 60-day satisfaction guarantee. If your application or site has any compatibility or scalability issues with GSI's Matrix, we will migrate it to physical servers in our SAS-70/PCI-DSS compliant enterprise data center free of charge.
