

GSI LAUNCHES MATRIX VIRTUALIZATION PLATFORM

FOR IMMEDIATE RELEASE

Kansas City, MO (March 12, 2009) – GreenSoft Solutions Inc. (GSI) announces its new Matrix virtualization platform. Designed to capture the full benefits of virtualization technologies, the GSI Matrix is an enterprise-class infrastructure targeted at the professional and corporate IT buyer. GSI's Matrix combines best-of-breed technologies, ServerHeroes™ support, and a performance guarantee into a true enterprise-ready hosted virtualization platform.

Rapid deployment of VM templates that are secure, patched and preconfigured is an extreme advantage to the GSI Matrix platform. GSI has dozens of templates available for deployment in a matter of minutes and can build customized templates for future use. This virtualization platform offers real technologies from VMware, Cisco, Dell, Network Appliance and Force 10 Networks. GSI's hardware-independent, redundant platform allows for maximum online time and system availability. GSI's Matrix offers flexible month-to-month contracts, daily snapshots for maximum recoverability, instant access to private network zones, firewall configuration changes and additional resources. This green computing platform uses 50% less power and cooling than traditional servers.

“Unlike other cloud computing solutions, the GSI Matrix is based upon enterprise-class technologies and managed in an enterprise-class manner by our ServerHeroes™ staff,” said Robin Greenhagen, CTO and Founder of GSI. “By utilizing the GSI Matrix, clients can achieve the cost efficiencies of traditional virtualization environments without having to sacrifice the safety, security and documentation surrounding their corporate data.”

GSI's Matrix is backed by GSI's 24x7 ServerHeroes™ staff, providing a full suite of management services to Matrix or physical servers. ServerHeroes™ support includes site and server health monitoring, backup services, operating system and database management, application configuration support and a full range of IT compliance and security services.

GSI is in its second decade of hosting complex IT environments. The Matrix virtualization platform is built upon a fully PCI-DSS securely-managed infrastructure meaning data, applications and business integrity can truly be protected. GSI was the first hosting provider validated for managed hosting services by VISA's CISP program, and is a leader in PCI-DSS compliant managed hosting services. GSI will manage Matrix VMs with the same level of security and protection as a PCI-DSS regulated physical server.

About GSI

GSI (www.gsihosting.com) provides its clients with technology strategies and customized, scalable and innovative solutions for managing hosting, regulatory compliance, storage, and data security management. GSI's world-class data centers combined with 24x7 ServerHeroes™ management assure applications remain available and secure at all times. Our “Let's Get It Done Right” commitment brings a superior level of confidence and freedom to IT management, allowing GSI's clients to achieve a more strategic approach in their business operations.
